Client Situation

Internal Drivers

- Need for a ERP system to integrate business process of different divisions in client
- Since the client is diversified into many fields such as construction, trading & renting, there is a need for a system to do Project tracking and Accounting

Congruent's Solution

- Congruent has designed and developed custom solutions in Microsoft Dynamics Solomon to integrate process in different divisions and to reduce the manual work
- Developed custom solutions to handle sales orders, purchase requisitions, sending quotes to vendors, clearance & delivery of goods and allocation of landed cost to the received goods
- Developed Custom screens to export & import data between procurement & site
- Created various reports to view status of requisition, purchase order, Item costing and other financial reports to track the business activities

Key Challenges

- Integrate business process of different divisions in client's place with a single ERP System
- Replace the existing Point of Sales software and integrate their sales process with the ERP system
- Handling Receipt, clearance & delivery of goods including landed cost charges

Benefits

- Seamless integration of Sales and Project accounting within a single ERP there by enhancing productivity and reducing manual work
- A single ERP system to handle the business process and day to day activities more effectively
- Efficient and Effective reports to make Business decisions
- Good analysis and better decision making

Technology Used

- Microsoft Dynamics Solomon 6.5
- Microsoft SQL Server 2005
- Crystal Reports for Solomon
- FRx
